A way of input/output control in Visual Basic language

Wang, Ningsheng; Jiang, Chengyu; Shen, Jing; Li, Xiu

Abstract

With the powerful function of graphics interface video-programme and code maintenance, Visual Basic is favored by many programmers. But VB has not afforded the function to operate the I/O directly, that makes difficulty to program the system relating to the hardware interface. In this paper, a way of expanding VB function to operate I/O by DLL is particularized. Furthermore, an application instance is presented.
